

PREGNANT WOMEN

Do you know the health of your gums affects the health of your unborn baby?

Research shows that a pregnant woman with gum disease has a higher chance of having a baby too small.¹

Pregnant women should see a dentist at least one time during pregnancy. Necessary treatment can be provided throughout pregnancy.

Gum Disease

- When you are pregnant, you have a higher risk of gum disease.
- Gum disease doesn't hurt, so you might not know you have it.
- If your gums bleed when you brush, you may have gum disease.
- The best way to ease chances of gum disease is to brush your teeth at least once a day, but twice a day is better.
- If you think you might have gum disease, see your dentist. Early gum disease is easy to treat.

Pregnant women should see a dentist at least one time during pregnancy.
