FHIR Patient

Base Path: integration.dentaquest.com/ws/rest

Version: 1.0

The FHIR Patient API allows you to search for and look up patients, individuals or animals receiving care or other health-related services. The endpoint provides the ability to:

- Retrieve all Patient resources that match a search criteria.
- Retrieve one or more Patient resources based on their resource ID.

This API is based on the FHIR standard, version 4.0.1.

Authorization: OAuth 2.0 Bearer token + API Key authorization is required to access the resources of this API. Once approved, consumers will receive credentials and a valid API Key via email. The following request headers are also required:

- member-first-name
- member-last-name
- member-date-of-birth
- member-subscriber-id

Methods

Search for Patients

GET [base_path]/v1/fhir/patientaccess/Patient/

This method returns details of patients that match the supplied search criteria. Patient searches may be performed by supplying one of the following minimum criteria:

- _id
- [empty query]

Parameters

Name	Type	Data Type	Description
_id optional	query	string	The id of the Patient source **Sample Value:** DH-8e3fgfd0-f5cd-4cc9-b99j-081008f738fa
[empty query]	query		The query returns details of the Patient source using the request headers in 'Authorization'

Responses

application/json+fhir

200
Returns a FHIR Bundle containing 0..* OperationOutcome resources and 0..* Patient resources

Retrieve a single Patient
